

Prado-P Remote-controlled screen

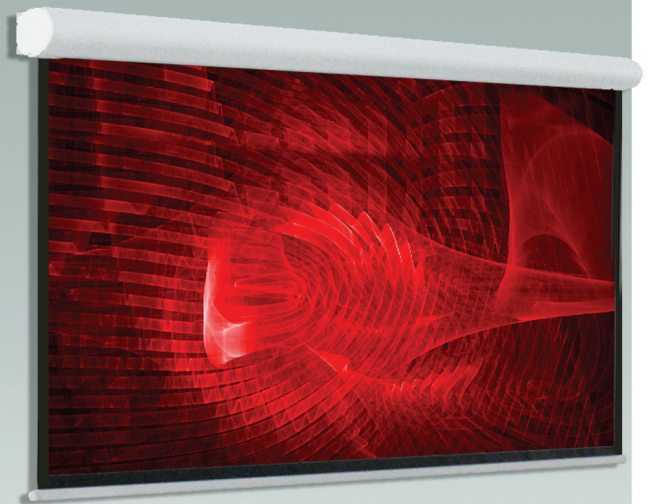

Motorised front projection screen
 InfraRed and RF remote controls
 Plug n Play

PRADO-P MOTORISED SCREENS use only the highest quality USA grade matt white, fibreglass backed projection screen fabric, and are operated by whisper-quiet motors.

All screens have black borders including a 30cm top black leader (45cm for 16:9 and 16:10 format). The proportion of exposed leader can be varied using limit switch adjustment - very useful in recessed ceiling or high ceiling installations. A safety cutout mechanism guards against damage from incorrect limit switch adjustment.

The screen case is made of aluminium, with an attractive round face design, and finished in modern white powdercoat. The wall fixing brackets are incorporated into the back of the screen case, and can be adjusted horizontally to line up with wall studs.

All screens include a built-in remote control that can be operated by RF or IR remote control, or by 12V relay command from a control system. Installation is easy - simply plug the IEC cord provided into a power point. The plug can be removed for concealed wall fixing if preferred.

RF and IR remote controls supplied

Socket for 12v relay

Sliding wall mount brackets

CEILING MOUNTING - PLEASE NOTE:

Brackets for ceiling mounting are available as an option (PRADOCB), but do not ship as standard with the Prado screen.

Please indicate on your order if the optional ceiling brackets are required.

Prado-P screens are covered by 1 year warranty
